In optics, polarized light can be described using the Jones calculus, discovered by R. C. Jones in 1941.

Polarized light is represented by a Jones vector, and linear optical elements are represented by Jones matrices.

The direction in which the wave vector points must be distinguished from the "direction of wave propagation". The "direction of wave propagation" is the direction of a wave's energy flow, and the direction that a small wave packet will move, i.e. the direction of the group velocity.

Le prime teorie sul funzionamento dell'occhio, sulla luce e sulle immagini risalgono all'antica Grecia, in particolare a Pitagora che, nel VI secolo a.C., sosteneva che l'occhio inviava raggi visuali, pensati come rette, a esplorare l'ambiente esterno.
