A drilling process presents a rotating drill string which is placed into the well. A drilling fluid is pumped through the drill string and exits through the choke valve . There are many disturbances that produce fluctuations in the annulus pressure during oil well drilling. There are a number of different standard types of control systems that have been studied extensively. These controllers, specifically the P, PD, PI, and PID controllers are very common in the production of physical systems, but as we will see they each carry several drawbacks. Il controllatore acquisisce in ingresso un valore da un processo e lo confronta con un valore di riferimento. La differenza, il cosiddetto segnale di errore, viene quindi usata per determinare il valore della variabile di uscita del controllore, che la variabile manipolabile del processo. Sat, 08 Dec 2018

Peer Reviewed Journal - IJERA.com - The growth of a trunk is achieved by two kinds of events, each controlled by specialised parts of the plant. The first is mediated by the shoot (apical meristem) located on the top of the tree and is responsible for predominantly upward primary growth. The wood from the trees: The use of timber in construction ... -
